Patient Paging

Reach Your Customers Right Away No Matter Where They Are

Long Range Systems has been helping medical facilities provide quality patient care since 1993 with our on-site paging systems.

These systems help streamline patient flow, improve staff efficiency and eliminate intrusive overhead paging.

They also help healthcare facilities comply with HIPAA regulations that require patient confidentiality. Just hand a pager to a patient when they check in, and it will flash silently when the physician, nurse or administrator is ready to see them.

LRS pagers are ideal for any facility and department, including:

- Hospitals • Medical Offices • Admissions Family Paging • Day Surgery • Emergency Room • Physical Therapy • Radiology • Pharmacy • Laboratory

Adverteaser

- Only pager on the market with a double-sided space for Instructions

- One-piece construction means no broken handles

Coaster Call

Most popular customer pager on the market

- Customizable labels available
- Patented stack charging
- Durable rubber bumper

Family Paging:

Give family members peace of mind. With LRS pagers, they don't have to stay in the waiting area. They can visit the cafeteria, gift shop, chapel, or other areas with the confidence that they can be reached instantly if needed.

Being able to quickly locate family members also improves staff response time when caring for a patient. If a physician or nurse needs to consult someone, they send a silent page instead of waiting for them to return or searching for them. This is especially important in critical or emergency situations where every minute counts.

Staff Paging

Keep Your Staff Connected- Always

Better communication means better care. Your staff now has a convenient and discreet way to communicate within your facility. They can send detailed messages to staff or patients via LRS Vibe+ pagers. Entire departments can also be messaged simultaneously

Why You Need Them:

- **Improved response times**

Messages are received immediately

- **Improved patient flow**

Time saved on the staff's end of things speeds up wait times for patients

- **Increased Productivity**

Accomplish more instead of searching for coworkers

- **Maintain Patient Privacy**

Silently call staff for sensitive procedures

TX7471 and Vibe + System

The LRS Vibe+ pager is a replacement for the 4-line alpha, with massive improvements. The AP2 Vibe+ is a full-colour backlit pager that displays scrollable text for improved readability.

Used to notify staff that they are needed and can be used in all industries where staff need to stay in communication.

Vibe+, when used with the TX7471 transmitter, can be preprogrammed with preset messages that can be selected on the transmitter to deliver to an individual or a group.

Pronto

The low-cost, short-range paging solution. This unit attaches to almost any wall, table, or other surface and comes in one- and 6-button models. Transmitters and pagers can be added to your system at any time.

Emergency bedside paging systems can be used in all private and public NHS hospitals, Doctors surgeries, healthcare sectors.

This can be used by staff and patients, for example, bedside care or reception staff.

Capture Technologies Text Staff Pager is a great paging solution that allows staff to be notified via text at any time.
